4043TR RECIRCULATING IMPACT CRUSHER DEBUTS AT MINExpo 2016

ETNA, Ohio – Screen Machine Industries has a new addition to its industry-leading line of Impact Crushers – the 4043TR Recirculating Impact Crusher.

Built with all the rugged performance and durability of our standard 4043T, the 4043TR Recirculating Impact Crusher offers two additional functions:

- A large two-deck screen, fed directly from the crusher, delivers sized product off the fines conveyor at the front of the machine
- An additional radial overs conveyor feeds directly back into the hopper, or can be positioned to the side for stockpiling

The 4043TR incorporates two of our patented technologies — the *Crusher Relief System™* for the crusher lid and *Smooth Start®* for the screen box. No other machine in the industry brings together these innovations and functionalities.

“This machine is a true workhorse and we are excited about its potential,” said President Steve Cohen. “When you evaluate all the innovation and patented technology that goes into this machine, and add in all the other elements that make Screen Machine products better, like USA-made, Grade 80 steel, it’s obvious there’s nothing on the market that can compare.”

Additional features of the 4043TR include:

- 5'x12' two-deck shaker screens, with heavy throw (3/8" at 1100 rpm)
- Swiveling recirculating conveyor with cross conveyor for smooth material flow
- Overs return conveyor projects material far into the hopper and spreads it across the feeder. Prevents uneven wear on one side of rotor

The 4043TR is one more reason that Screen Machine continues to lead the crushing and screening industry in design, durability and productivity. Complete details about Screen Machine and our products can be found at www.screenmachine.com

NOTE: Complete specifications and high resolution photos available upon request.
