## **SCREEN MACHINE CELEBRATES 50<sup>TH</sup> ANNIVERSARY; DEBUTS 2 NEW MACHINES**

ETNA, OHIO – When it's time to celebrate a 50<sup>th</sup> Anniversary, you do it in a BIG way. At Screen Machine, that means debuting about 75 tons of new machinery and welcoming nearly 700 guests for the day.

On Thursday, June 23, Screen Machine invited dealers, suppliers, local, state and federal officials, families of employees and other special guests to its 125,000-square foot facility in Etna, Ohio. It was a day to celebrate a great American success story, and to look ahead to a bright future.

"Fifty years is a long time," said President Steve Cohen. "Screen Machine Industries not only survived but prospered through many recessions and wars. A business must adjust to survive."

In testament to the company's plans to not only survive, but thrive, in the years to come, Screen Machine debuted two new machines at the 50<sup>th</sup> Anniversary Celebration:

- 4043TR Recirculating Impact Crusher – Featuring a two-deck screen fed directly from the crusher, the 4043TR delivers sized product directly from the fines (front) conveyor. Meanwhile a return overs conveyor delivers larger product back to the crusher hopper.
- 514TS3 Spyder – A triple-deck screen that delivers up to four products simultaneously – fines, small mids, large mids and overs.

"These machines are all about efficiency," said Doug Cohen, Vice President of Operations. "The 4043TR allows the operator to produce crushed and sized product from a single machine. The return conveyor ensures the product keeps recirculating until it is reduced to the desired size. The 514TS3 adds an additional deck to our mid-priced screening plant."

In addition to seeing these two new machines, 50<sup>th</sup> Anniversary attendees enjoyed factory tours led by Screen Machine engineers, were able to "drive a Screen Machine" scalper, had a chance to run a hoist, could visit the I Make America interactive game and had an opportunity to view a crushing and screening demonstration. A barbeque lunch also was provided.

During a brief lunchtime presentation, Screen Machine Founder Bernard Cohen recalled that his accountant told him 50 years ago that nine out of 10 business failed in their first three years. "I wonder what he would say today about our company," said Mr. Cohen.

Screen Machine is a leading manufacturer of crushing and screening equipment, trommels and conveyors. Screen Machine products are renowned for the rugged reliability, with all equipment manufactured in our Etna, Ohio facility. Screen Machine has seven design patents, one key reason its machines lead the industry in innovation and productivity.
