SCREEN MACHINE® Scalper 107T Introduced

Portable Screening Plant Offers High Mobility and Low Maintenance

Presenting another choice for meeting the rugged and versatile demands of portable aggregate screening, Screen Machine has developed the Scalper 107T. This patented machine features Caterpillar tracks, heavy-duty plate construction, twin 7 ft long double deck vibrating variable pitch screens and Cummins power. It easily accommodates punch plate, wire cloth, or harp style screens or a T1 grizzly bar section. As always, all controls are readily accessible for one operator including the remote control drive.

The Scalper 107T has an attached fines conveyor with a 42" wide belt. The Scalper 107T conveyor is equipped with 5" sealed idlers, rubber disc return idlers, rubber lagged head pulleys, and self cleaning tail pulleys assuring continuous operation. The Cummins Diesel engine supplies auxiliary power for an additional stacking conveyor.

The simple design of the Scalper 107T allows for easy use and low maintenance. All replacement components are off-the-shelf name brand parts. The Scalper 107T eliminates special order and out of stock downtime. The Scalper 107T has grade 80 steel wear plate construction.

Screen Machine is the leader in innovation and design of portable screening equipment. All Screen Machine products are heavy duty and made in the USA. Additional products include blenders, wash plants, trommel screens, conveyors, and various sizes of screening and shredding plants to meet the requirements of any job.
