

Screen Machine Industries LLC is proud to announce the newest addition to their extensive product line, the Spyder 514TS. This unit is a patented, track-mounted reverse style screening plant designed for secondary screening of rock, sand & gravel, and other materials. Equipped with a 5'x14' double-deck screen with *Smooth Start® Technology*, this heavy-duty machine is capable of producing up to three different finished sized products simultaneously.

The versatile 514TS can be used as a stand-alone screen, or in conjunction with a crusher and offers the ability to close circuit the oversized material back into the crusher for further reduction without the need for additional conveyors. This is the latest example of Screen Machine's innovative efforts to remain at the forefront of technology in the industry. For more information on this and other Screen Machine products visit www.screenmachine.com.
